Abstract

Perusing Indic classics on the web is an increasingly popular activity. However, serving and maintaining feature-rich websites involves significant costs, knowledge and effort. We present an easy to use website framework to solve mitigate these drawbacks. Besides being simple and low-cost, the proposed solution is rich in features - including easy transliteration, navigation aids, annotation support, dynamic content inclusion and more.

1 Motivation

2 Static site generation framework

Hugo is a popular static site generation framework (Hugo Authors, 2022).

3 Client side dynamism
